

Safely Making your Memories Last Forever

Makit Products Inc is committed to manufacturing the safest, highest quality personalized melamine products. As valued customers, you should know that Makit Products Inc complies with all ASTM standards set down by the ANSI (American National Standards Institute) and as required by the Consumer Product Safety Commission (CPSC), including, but not limited to, testing for flammability, heavy metals (including lead paint), and more. Our dedication to producing quality products has been paramount since our inception in 1969, and you can trust that now, more than ever, we are committed to raising our standards even higher.

In addition to the required product testing, Makit Products Inc is instituting a secondary inspection operation, where our products will be randomly selected from the production lines and tested independently for verification of compliance to the required safety tests. This secondary testing will be outside the review or influence of the manufacturers, and is being done to assure that test results are unbiased and reliable. This will serve to create a fail-safe in the already stringent testing process. All testing is done by certified, well recognized laboratories. Testing certificates for individual products are available upon request.

Providing safe products is the priority of the toy/craft industry and Makit Products is committed to continuous improvements in design, testing, and inspections to ensure the highest quality.

Makit Products Inc. is committed to keeping our children safe. As our long-time retailers and consumers, we value, respect, and understand your concerns. For more information on the recent recalls and safety standards logon to www.toys-tia.org, www.cpsc.gov, or www.astm.org.

We have successfully tested our product(s) in the following areas:

- A. 16 CFR 1303 Ban of lead-containing paint and certain consumer products
(CPSC, Consumer Products Safety Commission)
- B. 16 CFR 1500 Federal Substances Act Regulation
- C. 16 CFR 1500.3 Hazardous Substances and Articles, Flammable Solids (FHSA)
- D. 21 CFR 175-177, 181 Indirect Food Additives (FDA) for use as articles intended to be in contact with food at normal condition.
- E. Phthalates (markers only)
Note: Phthalate testing and California Prop 65 is currently not required on melamine articles.
- F. Biphenyl-A
- G. CONEG
- H. ASTM D-4236 (markers only) Standard Practice for labeling art materials for chronic health hazards (American Society for Testing and Materials)
- I. CONEG (packaging only) Heavy Metals content in packaging of model tox 6
- J. 16 CFR 1500.4 (markers only) LHAMA, Labeling Hazardous Art materials Act)
